Description

The IRS20752 is a high-side, single-channel gate driver IC with 200V blocking and level-shifting capability. This allows for the gate driver to be connected directly to the gate of a high-side power MOSFET, while being controlled by the low-side, ground potential circuitry. The IRS20752 includes a wide V_{CC} supply range, UVLO protection, and excellent immunity to harsh dv/dt or $-V_S$ switching environments. IR's HVIC technology allows for these functions and features to be realized in a 6-pin SOT-23 package.

Applications

- High-side gate driver control
- Pulse transformer replacement
- General purpose switched mode power electronics

Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to COM, all currents are defined positive into any pin. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.
